Generative AI Engineer, Full-Stack Developer

Computer Engineer specializing in Generative AI and full-stack development, with 4+ years bridging software and hardware — from LLM/RAG pipelines and React frontends to embedded systems and IoT. Built and shipped production AI tools with real-world impact, competing in 6+ hackathons with Champion and 2nd place finishes.

Education

**BATANGAS STATE UNIVERSITY - THE NATIONAL ENGINEERING UNIVERSITY** July 2025  
Bachelor of Science in Computer Engineering GPA: 1.5751, *Outstanding Achievement in Computer Engineering*  
Thesis: *Implementing Smart Buoy Technology with Deep Learning Algorithm for Detection of Drowning Instances in Taal Lake, Batangas*

Experience

**DXC TECHNOLOGY** Sep. 2025 - Mar. 2026  
*Analyst II ERP Package Applications*

- Managed 3 simultaneous client accounts, monitoring SAP tickets, minimizing SLA breach risks, and collaborating with foreign consultants to resolve complex cross-account cases faster
- Built weekly status reports adopted by foreign consultants and resources across recurring cross-functional meetings

**FLYHUB DIGITAL** Jul. 2025 - Sep. 2025  
*Junior Software Engineer, Quality Assurance Intern*

- Built customized invoice generation systems for 3 live client projects using PHP and MySQL, and handled AWS deployment for production releases
- Executed full QA cycle on Flyhub's production website, catching and eliminating critical bugs to maintain a seamless client-facing experience

**BATSTATEU ACTION CENTER** Jan. 2025 - Mar. 2025  
*Full-stack Developer Intern*

- Built a real-time GIS web extension for BatStateU's main website that ingests satellite-captured FMA data and renders it live on an interactive map, eliminating manual update workflows via Google Drive API and Supabase
- Delivered using React, Leaflet, Vite, and Tailwind CSS, integrated directly into the university's existing web infrastructure

*Freelance Developer — Python, Java, & Embedded Systems* Jan. 2021 - Jan. 2025

- Delivered 15+ software projects across Python and Java covering front-end GUIs, back-end systems, and full-stack desktop applications for various clients
- Designed and built embedded IoT solutions using Arduino, ESP32, and Raspberry Pi, programming in C/C++ for real-world automation use case

Projects

*CodeSpotlight - AI Codebase Intelligence & Interactive Chat Platform* [link](#)

- Built and deployed a production AI tool that scans any GitHub repository and generates architecture summaries, pattern analysis, and risk assessments powered by a RAG pipeline to eliminate hallucinations, featuring an interactive chat interface for deep-diving into any codebase without needing a senior developer; submitted to DXC Techno-thon'26: Gen AI Innovation Challenge

*CloneX - Plug-and-Play AI Conversational Agent Platform for Developers and Businesses* [link](#)

- Engineered a full RAG pipeline that ingests documents, generates vector embeddings via sentence-transformers, and stores them in FAISS, enabling any document set to become a production-ready, named conversational AI deployable as a custom customer support agent, virtual assistant, or branded chatbot for any business or developer using only their own documents, served via a streaming inference API

Awards and Hackathons

|                                                                                                        |                          |
|--------------------------------------------------------------------------------------------------------|--------------------------|
| DXC Techno-thon'26: The Gen AI Innovation Challenge - <i>CodeSpotlight</i>                             | Candidate, 2026          |
| STMicroelectronics: STM32 Innovation Hackathon                                                         | Semifinalist, 2025       |
| Techtopia: An Exhibition of Innovation - <i>City-wide Aqua Network with Active Linkage</i>             | Finalist, 2024           |
| Nuzlocke: 3d Collage                                                                                   | Champion, 2024           |
| CpElympics: Design Sprint - <i>OIL AWAY!</i>                                                           | 2nd Place, 2023          |
| ICpEP.se CpE Challenge: Robothon - <i>Sustainable AgroBot: A Dual-Powered Robot for Soil Arability</i> | Candidate, 2023          |
| Dean's Lister                                                                                          | Top 7, 2024              |
| Top Performing Student                                                                                 | Top 6, 2022, Top 3, 2023 |

Skills & Tech Stack

**Generative AI & LLMs:** LLMs, RAG, OpenAI API, LangChain, FAISS, sentence-transformers, Prompt Engineering, Agentic AI, MCP  
**Machine Learning & Computer Vision:** YOLO, OpenCV, TensorFlow, scikit-learn, Deep Learning, Computer Vision  
**Languages:** Python, JavaScript, Java, PHP, C/C++, SQL, HTML/CSS  
**Web & Frameworks:** React.js, FastAPI, Flask, Django, Vite, Tailwind CSS  
**Databases & Cloud:** MySQL, Supabase, AWS, Vercel, Git, GitHub
